Objectives & Context

1

Objective:

- To analyze outreach and application data to uncover key performance drivers influencing enrollment outcomes.
- To identify trends, engagement patterns, and conversion gaps using data-driven insights.
- To develop actionable recommendations that enhance outreach efficiency and improve response and conversion rates.

2

Context:

- Excelerate's outreach campaigns aim to connect potential learners with academic programs and boost enrollment.
- Despite steady outreach efforts, engagement and conversion performance varied across time, region, and category.
- This analysis helps pinpoint where improvements in timing, targeting, and communication strategy can yield higher enrollment impact.

Insight 1: Outreach Volume Peaks Drive Higher Response Rates

Supporting Visual:

Monthly Outreach vs. Response Rate (Line & Stacked Column Chart)

1

Key Finding :

- March achieved the highest response rate (2.7%) with fewer outreach attempts.
- July had the highest outreach volume (~8K) but lower engagement, showing volume ≠ effectiveness.
- Late-year (Aug-Sep) activity and responses dropped sharply.
- Pre-Admission attempts were fewer but had variable success across months.

Recommendation :

- Replicate March's strategy — review timing and messaging behind its strong performance.
- Maintain consistent outreach across all months to reduce seasonal dips.
- Optimize effort mix between Pre- and Post-Admission campaigns based on ROI.
- Plan staffing around high-response periods for better efficiency.

2

Insight 2: Certain Countries Show Higher Engagement

Supporting Visual:

Top Countries by Response Rate (Clustered Bar Chart)

1

Key Finding :

- Canada and South Africa lead with response rates above 6.5%, nearly double the next highest (Philippines at 4.1%).
- A sharp drop occurs after the top four countries, with most others below 2.5%.
- The “Unknown” group shows a moderate 2% response rate, limiting geographic insight.

2

Recommendation :

- Focus on high performers — replicate successful outreach strategies from Canada and South Africa in similar markets.
- Review low-performing regions — assess language, timing, and channel fit for countries with minimal engagement.
- Improve data quality — ensure every outreach record includes accurate country data to refine targeting.

Insight 3: Campaign Category Strongly Influences Engagement

Supporting Visual:
Response Rate (%) by Category (Donut Chart)

1

Key Finding :

- Post Admission dominates with 56.9% of total value (~0.01365).
- Pre Admission contributes a strong 43.1% (~0.01036), showing meaningful engagement.
- The 13.7% gap indicates moderate difference — both categories play key roles in performance.

Recommendation :

- Optimize Post Admission efforts — focus on improving quality and conversion to boost overall results.
- Strengthen Pre Admission strategies — identify barriers and enhance communication to close the gap.
- Balance resource allocation — ensure both segments receive attention proportional to their contribution.

2

Insight 4: Escalations Positively Influence Conversions

Supporting Visual:

Conversion Rate by Escalation Requirement (Clustered Bar Chart)

1

Key Finding :

- Most conversions (~95%+) occur without escalation, showing the standard process is highly effective.
- Escalated cases contribute very little to total conversions (<1,000), indicating inefficiency or inherently non-convertible cases.
- Escalation is rare, and the success rate post-escalation is extremely low.

Recommendation :

- Standardize non-escalated process — document best practices to maintain high conversion rates.
- Investigate escalation failures — determine whether escalated cases fail due to process issues or unconvertible leads.
- Set clear escalation triggers — focus resources on cases likely to benefit from escalation and avoid unnecessary efforts.

2

Insight 5: Engagement Peaks at Specific Hours of the Day

Supporting Visual: Peak Hourly Engagement Trend (Line Chart)

1

Key Finding :

- Midday outreach (11:00–17:00) is high (~4,000–4,500 attempts) but yields a low response rate (<2%).
- Peak response occurs around 20:00 (8 PM), after attempts drop below 1,000, reaching ~4.3%.
- Morning ramp-up (8:00–11:00) generates high volume quickly but minimal responses (<1%).

2

Recommendation :

- Shift outreach to peak response hours — focus efforts between 20:00–22:00 to maximize engagement.
- Improve midday attempts — optimize messaging or targeting to raise conversion during high-volume periods.
- Assess morning ramp-up — adjust timing or quality to avoid wasted outreach and improve efficiency.

Suggestions

Next Steps

- **Deep-dive into demographics & regions:** Analyze university-level and country-specific trends to uncover hidden drivers of high engagement.
- **Optimize outreach timing:** Shift more outreach attempts to peak response hours (evening) and improve targeting during low-response periods (morning/midday).
- **Refine campaign strategy:** Focus on high-performing categories and markets, while improving low-performing segments with tailored messaging.
- **Enhance escalation & resource allocation:** Standardize successful non-escalated processes and optimize staffing for peak months and hours.
- **Monitor & test continuously:** Use dashboards to track key KPIs in real time and A/B test campaigns for ongoing improvements.

The analysis identifies key opportunities to enhance outreach efficiency and boost enrollment outcomes. Leveraging these insights, Excelerate can achieve higher engagement and make data-driven decisions.

Thank You

 **excelerate**
