PROJECT OBJECTIVES

OutreachData

Assigned
Datasets

CampaignData

ApplicantData

01

Dataset Cleaning

Handled Missing,
duplicate,inconsistent
values

05

Major Insights Identified

Key important insights were
recognized from Dashboard Analysis.

02

Joining Datasets

Ensuring accuracy, Joined the
datasets by identifying
primary & foreign keys

06

Recommendations

Analyzing the major insights, we
predicted recommendations for
optimizations

03

Exploratory Data Analysis

Analyzed & performed EDA of
the joined dataset to
understand the data insights

07

Action plan

Ready for Executing of
optimization plan

04

Interactive Dashboard Creation

Created an Iterative Dashboard including
important KPIs & Filters of Campaign
Outreach data Using POWER BI tool.

FINAL DASHBOARD

Dashboard Summary

KPIs: Tracks Total Outreach Attempts (40K), Response Rate (1.29%), Connectivity Rate (99.35%), Avg Attempts per Response (77.42), and Escalation Rate (2.09%).

Filters: Global filters for Month, Country, Category, and Campaign ID.

Visuals: Includes Outreach vs Response Trends, Top Countries by Response Rate, Conversion by Escalation, Category-wise Response %, Weekly & Hourly Engagement Patterns, Outreach Volume Over Time and Outcome & Phone Call Connectivity Overview.

Insights: Provides a clear, data-driven view of outreach performance to support strategic decision-making and enrollment growth.

KEY INSIGHTS

Monthly Outreach vs Response Rate

Insights:

- July recorded the highest outreach volume (~8K) with a solid response rate (~1.8%).
- March achieved the peak response rate (~2.8%) with moderate outreach (~4.8K).
- Outreach volume declines steadily after midyear, lowest in August–September.
- Response rate varies independently of volume — higher engagement doesn't always follow higher outreach.

Top Countries by Response Rate

Insights:

- Canada and South Africa lead with the highest response rates (>6%), followed by the Philippines (~4%).
- Sharp drop-off after the top three; most countries fall below 2%.
- Bottom-tier nations (e.g., Nigeria, Nepal, Kenya, Iran) show minimal response (<1%).
- Outreach effectiveness is highly concentrated in a few top-performing countries.

KEY INSIGHTS

Response Rate by Category

Insights:

- Post Admission holds the major share (56.87%), driving overall performance.
- Pre Admission contributes 43.13%, remaining a key segment.
- The difference (~13.7%) indicates both stages are significant for outreach success.

Phone Call & Outcome Matrix Charts

Insights:

- 📞 **Phone Call Connectivity:**
 - High technical connectivity (~99%) with negligible disconnections.
 - Nearly 40K calls indicate large-scale outreach.
- 🧠 **Engagement Outcome:**
 - Extremely low success (8/27K), showing major drop-off after connection.
 - Outreach strategy needs improvement to convert calls into meaningful engagement.

Peak Hourly Engagement Trend

Insights:

- Outreach peaks in the late morning (11:00–13:00) but yields a low response rate (<2%).
- Highest response (~4.3%) occurs in the evening (around 20:00) with fewer attempts.
- Evening outreach proves more efficient, while midday efforts show low effectiveness.
- Suggests shifting outreach focus from midday to evening for better engagement.

SUMMARY & OPTIMIZATION PLANNING

Summary of Insights

- High-performing regions: Canada and South Africa lead with the strongest response rates (>6%), while most others fall below 2%.
- Post Admission efforts contribute 56.87% of overall performance, slightly higher than Pre Admission (43.13%), indicating both stages are vital.
- Phone connectivity is high (~99%), but engagement success is extremely low (8/27K).
- Evening outreach (around 20:00) yields the highest response rate (~4.3%), whereas midday outreach shows high volume but lower efficiency.

Optimization Planning & Recommendations

- Shift outreach timing toward evening hours (18:00–21:00) for better response rates.
- Reinforce top-performing regions (Canada, South Africa) and strategically improve underperforming areas via targeted engagement.
- Enhance post-call engagement strategies to convert connections.
- Balance resource allocation between Pre and Post Admission stages to optimize overall yield.
- Use data-driven scheduling and A/B testing to refine timing and channel strategies continuously.

Expected Outcomes

- +15–20% increase in overall response rate through better timing alignment.
- Better conversion from connected calls.
- Optimized regional engagement strategy leading to broader success distribution.
- Higher process sustainability and improved operational ROI.

By implementing this plan, we can transform outreach into a high-impact, data-driven engine for sustained enrollment growth and measurable success.

CONCLUSION

Thus, the outreach analysis reveals valuable insights into engagement effectiveness across time, regions, and admission stages. Strategic timing, regional targeting, and process efficiency are identified as key factors influencing overall response and conversion rates. These findings provide a strong foundation for data-driven decision-making, enabling optimized outreach strategies and improved future campaign performance.

We, the team, sincerely thank Excelerate, our department head, and associates for the opportunity and guidance during the Early Internship program, which greatly enhanced our analytical and visualization skills.

THANK YOU

 **excelerate**
